

Non-food retail: areas at risk

Managing a retail property can be challenging. Safeguard your reputation by eliminating disruptive and costly encounters with pests such as rodents, birds, and cockroaches.

Discover areas where pests pose the biggest risks using our industry-specific risk map – a great resource to share with personnel who oversee your pest prevention efforts.

Top 5 hot spots

1. Food courts
2. Restrooms
3. Parking structures
4. Garbage/recycling areas
5. Exit/entry ways

Key risks to your business

Birds - Droppings are a slip and fall hazard and may contain harmful bacteria. Nesting materials and feathers can damage equipment and may pose a potential fire risk.

Flies - Can contaminate food and surfaces, potentially spreading *Salmonella* and other types of bacteria that can make people sick.

Cockroaches - Can contaminate food and surfaces. May carry bacteria, such as *E. coli* and *Salmonella*.

Rodents - Can contaminate food and surfaces and destroy equipment, wiring, and physical structures. May carry disease-causing pathogens.

Ants - Can contaminate food and surfaces. Bites may cause allergic reactions. Known to infest equipment and chew wires, potentially causing electrical disruptions.
